Evaluation ID: LVR-12 **Effective Date:** November 1, 2016

Re-evaluation Date: November 2020

Product Name: FL-D-4 Aluminum Louver System, Impact Resistant

Manufacturer: United Enertech, Inc.

3005 South Hickory Street Chattanooga, TN 37407

(423) 698-7715

General Description:

Louvers manufactured of extruded aluminum and assembled using extruded aluminum blades. The louvers are used for exhaust and intake ventilation openings in the exterior wall of the structure.

Design Drawings:

"Aluminum Louver System Model FL-D-4," manufactured by United Enertech, Inc., Drawing No. 16-006, Sheets 1–13 of 13, dated January 20, 2016, signed, sealed, and dated January 21, 2016 by Walter A. Tillit, P.E.. The stated drawings will be referred to as approved drawings in this report.

Limitations:

Configurations:

- Single Units
- Multiple Units Horizontally
- Multiple Units Horizontally and Vertically

Mounting Conditions:

- Wall Mount
- Trapped Mount

Wall Construction: The louvers may be mounted to the following types of wall framing:

- Pre-cast concrete, cast-in-place concrete (minimum compressive strength required specified in drawings)
- Grout-filled concrete masonry units (CMU)
- Wood (minimum Southern Yellow Pine dimension lumber, S.G. = 0.55)
- Steel (minimum 1/8" thick, ASTM A500, A653, or A36)

Allowable Design Pressure: The allowable design pressure is a function of mullion construction, mullion spacing, mullion span, mullion connections, and substrate. The maximum allowable design pressure is +/-150.0 psf. Refer to the approved drawings for the allowable design pressure for a specific installation condition.

Maximum Width: The maximum width of a louver panel unit is 6'-0". Louver panel units may be placed side by side utilizing mullions to achieve an unlimited overall width.

Maximum Height: The maximum height of a louver panel unit is 6'-0". Louver panel units may be stacked to achieve an opening height. For such conditions, the maximum overall height is a function of design pressure, panel width, and mullion span. Refer to the approved drawings for the maximum allowable height.

Product Identification: The louvers must have a manufacturer-produced label that indicates the manufacturer: "United Enertech, Inc.", the name of the product: "Aluminum Louver System FL-D-4", the missile Level: Large Missile, and compliance with TAS-201, TAS-202, and TAS-203.

Impact Resistance: This louver assembly satisfies the Texas Department of Insurance's criteria for protection from windborne debris in both the **Inland I zone** and the **Seaward zone**. The assembly has passed a missile test equivalent to Missile Level D specified in ASTM E 1996. The assembly may be installed at any height on the structure as long as the design pressure rating for the assembly is not exceeded.

Installation:

General Installation Requirements: The louvers must be installed in accordance with the manufacturer's installation instructions, the approved drawings, and this product evaluation report. Copies of the approved drawings must be available on the jobsite during inspection of the louver assembly.

Anchorage: The louver must be anchored to the structure in accordance with the approved drawings. Anchorage of the louvers to concrete, grout-filled concrete masonry units (CMU), wood wall framing, and steel wall framing must follow the mounting conditions, fastener options, and fastener placement specified on the approved drawings.

Note: Keep the manufacturer's installation instructions available on the job site during installation. Use corrosion resistant fasteners as specified in the IRC, the IBC, and the Texas Revisions.
